

ABSTRACT

A load display device for a crusher, which is capable of efficiently performing crushing work by making an operator
5 recognize a load condition, is provided. For this purpose, the load display device for the crusher, which displays the load condition at a crushing section in the crusher, includes a monitor (30) provided at a location which the operator is able to recognize visually, and a screen (31) which is provided on the
10 monitor (30) and graphically displays a condition of a load at a crushing section (4A).
